

Initial setting

Unzip PSMServer

The following steps illustrate the initial setup of PSMServer:

- Unzip PSMServer:** The PSMServer folder is shown in File Explorer. The **PSM** folder is highlighted with a red dashed box and a callout: "upload this folder to android app".
- Upload SETTING.xml:** The PSM folder is shown in File Explorer. The **SETTING.xml** file is highlighted with a red dashed box and a callout: "upload this file to android app".
- Start PSMServer:** The PSMServer folder is shown in File Explorer. The **PSMServet.bat** file is highlighted with a red dashed box and a callout: "to start windows resident app".
- Terminal Output:** A terminal window shows the command prompt output for starting PSMServer. The output includes the IP address (192.168.0.14) and the port (6543). A callout indicates: "This server app Respond to requests from android apps".
